

Imprivata Confirm ID for Clinical Workflows

Modeus HS8 hospital-wide controlled drug platform

Key benefits:

- Optimises time taken to reauthenticate and witness Schedule 8 workflows
- Improve efficiency by replacing usernames and passwords with fast, automated authentication
- Improve auditing by increasing visibility into access and witnessing of restricted Schedule 8 medicines

Imprivata Confirm ID® for Clinical Workflows enables fast, secure authentication within Modeus HS8 controlled drug platform, including witness signing for drug administering (Schedule 8 workflows), reauthentication for observations, and notes and other medication workflows.

Modeus HS8

HS8 is a completely paperless solution that assists with controlled drug governance, compliance, and efficiencies throughout an entire hospital.

Governance, regulatory compliance, and safety

HS8 is compliant with jurisdictional health department-controlled drug regulations, providing a number of intelligent functions to assist with medication governance to improve controlled drug safety and reduce medication discrepancies, misappropriation, or fraud.

Register accuracy and operational efficiencies

HS8 provides an extensive range of automated functions and integrations that significantly streamline and automate medication-related administrative tasks. HS8 links register locations in real time, eliminating the need for double entry and significantly reducing the potential for errors.

Fast, convenient authentication

To increase security and visibility into clinical interactions with prescriptions and patient information, organisations can require clinicians to authenticate when completing these workflows.

Imprivata Confirm ID for Clinical Workflows integrates with the Modeus HS8 to streamline these workflows by enabling fast, convenient authentication through the simple tap of a proximity card (such as identity card) or fingerprint authentication, replacing the manual entry of usernames and passwords.

Through HS8 integration with Imprivata Confirm ID, a comprehensive identity and authentication workflow will enable all hospital users to confirm HS8 register entries via a fingerprint or a card tap instead of either paper-based signing of the Drugs-of-Dependence (DD) book, or entering a username and password.

A range of workflows supported through the integration include:

- Patient registration
- Sealed bag registration
- Supply to patient
- Destroy stock

About Imprivata

Imprivata, the healthcare IT security company, enables healthcare securely by establishing trust between people, technology, and information to address critical compliance and security challenges while improving productivity and the patient experience.

Imprivata Confirm ID for Clinical Workflows can replace any workflow within Modeus HS8 where a username and password are normally required by either the currently logged in user or by a secondary user for witness signing.

For all the reauthentication and witnessing workflows within HS8, a range of authentication options are available, including:

- Proximity cards
- Fingerprints
- Second-factor pin code if required for two-factor authentication compliance

These options can be configured as required to support local policies and governance requirements.

By enabling clinicians to quickly and conveniently authenticate when completing workflows within Modeus HS8, Imprivata Confirm ID for Clinical Workflows improves efficiency, increases clinician satisfaction, and allows for more time to be spent on patient care, all while improving security, patient privacy, and auditability.

This helps organisations drive adoption of the HS8 system to transform how built in workflows are used more efficiently in the delivery of patient care.
